#### METAL OXIDE VARISTORS TNR™ CHEMI-CON

TNR is a our metal oxide varistor metal oxide varistor having steep non-linear V-I characteristics and high discharge current capability, as follows:

#### Metal oxide varistor Features

- 1. Excellent transient voltage suppression
- 2. High discharge current capability
- 3. Wide range of voltage ratings
- 4. Symmetrical V-I characteristics (Non Polarity)
- 5. Fast response
- 6. Steady operation for repeating surge
- 7. Low temperature coefficient
- 8. High reliability
- 9. UL recognized
- 10. CSA recognized

# Applications

- 1. Electronics instrument protection
- 2. Telephone system protection
- 3. Relay contact point protection
- 4. Rectification diode protection
- 5. SCR protection
- 6. Reduction of abnormal voltage in high voltage current
- 7. Switching transistor proteciton
- 8. Reduction of switching surge in electromagnetic brake
- 9. Prevention of error in digital circuit
- 10. Reduction of noise from an abnormal voltage

## Part Numbering System

## The current parts numbering system is changed to new system for global coding. Your cooperation will be very much appreciated.

| ①Category     |             | ④Varistor Voltage                    |        |  |
|---------------|-------------|--------------------------------------|--------|--|
| т             | Metal Oxide | The first two digits are significant |        |  |
|               | Varistors   | figures and the third one denotes    |        |  |
|               | TNR         | the number of following zeros.       |        |  |
| ②Product Form |             | 5 Varistor Volt. Tolerance           |        |  |
| ND            | Disk Type   | K                                    | ±10%   |  |
| NL            | Sleeve Type | ⑥Packing Style                       |        |  |

| V–            | V Series    | Т                                    | Taping |  |

CHEMI-CON

| Technical Term   | Description   |  |  |  |
|--|---|--|--|--|
| Varistor Voltage   | Voltage across the varistor measured at CmA DC. $C = 0.1$ or 1.0 as specified.  |  |  |  |
| Max. Allowable Voltage<br>(ACrms)  | Maximum continuous sinusoidal RMS voltage which may be applied.   |  |  |  |
| Max. Allowable Voltage (DC)  | Maximum continuous DC voltage which may be applied.   |  |  |  |
| Maximum Clamping Voltage   | Peak voltage across the varistor, measured under conditions of a specified peak impulse current and specified waveform (8/20µs) applied 1 time.   |  |  |  |
| Rated Wattage  | Maximum power that can be applied within the specified ambient temperature.   |  |  |  |
| Maximum Peak Current   | Surge current withstand refers to the maximum current value that is within 10% of the varistor voltage against an initial value when the standard impulse current at 8/20 µs in accordance with IEC standards is applied once or twice within a five-minute interval. If this value is exceeded, a Varistor malfunction may result. When selecting a Varistor, select one that has a higher rate for a surge current than the anticipated surge current rate. |  |  |  |
| Current Wave Form for<br>Clamping Voltage Test and<br>Maximum Peak Current | Crest Value<br>100<br>90<br>50<br>50<br>10<br>20μs<br>10<br>10<br>10<br>10<br>10<br>10<br>10<br>10<br>10<br>10  |  |  |  |
| Energy   | Surge energy withstand refers to the maximum energy value that is within 10% of the varistor voltage against an initial value when a 2ms shortwave is applied once.<br>When a Varistor absorbs energy exceeding this value, it may malfunction.<br>Therefore, when selecting a Varistor, select one that can withstand a higher energy surge than the anticipated surge energy rate.  |  |  |  |
| Capacitance  | Typical value measured at a 1kHz test frequency.<br>(Sin wave. Reference purpose only)  |  |  |  |
