

# Thermal Coupler Equipping Service

It is very important for the Semiconductor manufacturing process and the LCD or OLED manufacturing process to control the surface temperature of the wafer and glass panels. We offer the service to equip a thin cable of thermal coupler to the wafer or glass panel, and provide the measurement data of the temperature map of these products.

## \*A difference between current service and our offered service

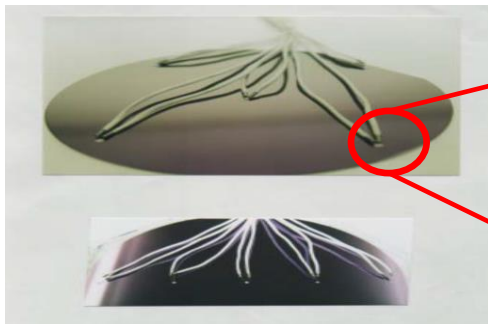

### General service

- Particle from fibrous insulation edge
- Easy to brake wire
- Easy to get off by small contact area

### Our service

- Inhibiting particle from fibrous insulation edge
- Using long life wire
- Upgrading contact strength
- High temperature response by extra fine-wire thermal

Thermal coupler wafer

Tip of thermal coupler

- We can supply a range of wafers including Silicon wafers, SiC wafers, Glass and Metal plates.
- We can provide custom made specifications as requested.
- We can also provide temperature measurement in a vacuum environment.

Reproducing all or any part of the contents is prohibited.
